Make sure your next chair has our name on it!

Folding... ology

It's all about technology and formulations

At Drake we use the most sophisticated technology and the best formulations for the applications.

SOLID ... as a ROCK!!! and this is why:

To make the **Structure** we use "co-injection" technology which allows the simultaneous use of a solid and cosmetic skin with a structured foamed rigid core, producing a solid shape.

To make the **Chip** we use the same "co-injection" technology, with gas assist, to obtain a cosmetic skin with foamed rigid tubular core and hollow shape.

The **Structure** by Drake and the **Chip** by Drake, have the same bright white color and the same light weight, but the Structure is solid and more rigid and the Chip is hollow and flexible making it practically unbreakable.

Formulations

Two models, two technologies and two different feelings. If you add different formulations to the technologies you will have:

Structure

By our standard available in white or black

Chip

By our standard available in white or black

Structure fire rated

TB 133 fire rated chair for public seating, white only

Chip E

Economy for Rentals, more affordable in price, white only

Structure Faux wood

With wood effect various colors available

Chip R

In the Chair-to-Chair program we use up to 95% recycled material various colors available

All our folding chairs take advantage of the Drake patents which, besides the stacking and interlocking possibility, concerns the load distribution.

The **LOAD** rests on the two bars supporting the seat, NOT on the screws as happens on similar chairs. TESTED at 500 lbs.

Two different technologies and two different formulations. The reason is to allow you to choose according to what you feel more comfortable with.

With the same co-injection technology of the Structure

We also have available
